

Big Picture Meets Big Sound with the Optoma HD33

HOME THEATER IN
MINNESOTA
BROOKLYN PARK, MN

PROJECT NEEDS

Home theater enthusiast Raphael Victorian needed big screen projection for gaming, 3D movies, Blu-ray, sharing pictures with his friends, listening to music and watching his favorite team, the Vikings.

EXPERT SOLUTION

Victorian chose the Optoma HD33 for its great picture quality, build, brightness and the price that was just right for his budget.

RESULTS

A satisfied customer and a big picture that matches his big sound system.

“I have always had so much sound, but such a small picture with my TV. Of all the research I’ve done, the HD33 is hands down the best option.”

– Raphael Victorian, home theater owner

Gaming and movie enthusiast Raphael Victorian is serious when it comes to entertainment. Victorian previously purchased a high quality audio system and 82-inch big screen TV for his previous home, but just wasn't satisfied with the screen size.

“I had the largest rear projection TV out there, but it just wasn't big enough anymore. I needed large projection to get that full theater experience that I've always wanted.”

The Search for the Perfect Home Theater

When the Victorians made the decision to move to Brooklyn Park, they knew they wanted to find a home that would support their home theater dream. They took their time searching for the perfect combination of ceiling height, room size and lighting that would best suit their home theater.

HD33

"I used the Optoma 3D DLP Link Glasses with my old TV. The glasses are awesome and I always had Optoma in mind. It didn't take long before I realized Optoma was the right choice for my projector."

Victorian spent about three weeks researching DLP projectors before he decided on the Optoma HD33. He read dozens of online user reviews and watched YouTube videos and unboxings of the HD33, in addition to discussing his options with friends and family.

Victorian found that all of the HD33 reviews promoted its great picture quality, high quality build and excellent brightness. Best yet, the price was just right for his budget. "I have always had so much sound, but such a small picture with my TV. Of all the research I've done, the HD33 is hands down the best option. This is my dream come true."

After a quick talk with his family, Victorian put in his order for his new HD33 and made an appointment to have it installed with his 135-inch screen. "My family was really excited that I was going with the big screen."

The Dream HD33 Home Theater

Victorian had his HD33 projector mounted on the ceiling of his new home

theater and installed his audio system to create the perfect movie and gaming environment. With the addition of a comfortable couch, a throw rug and handfuls of movie and gaming posters, Victorian's dream home theater was complete.

Victorian uses his Optoma HD33 home theater for Xbox, Playstation 3, 3D movies, Blu-ray, sharing pictures with his friends, listening to music and watching his favorite team, the Vikings. Last time we spoke to him, Victorian was lounging in his new home theater watching the NFL network on his huge, 135-inch screen.

"I needed large projection to get that full theater experience that I've always wanted."

— Raphael Victorian, home theater owner

When we asked him how he feels about his new home theater, Victorian said, "I'm very happy with my HD33. It's the perfect projector for me."

Victorian's criteria for his ideal home theater included a large enough area for comfortable seating and viewing, limited to no natural light, low enough ceilings for mounting a projector, ideal acoustics fit for surround sound, and plenty of electrical outlets.

Upon moving into their new home, Victorian measured the room that would become their new home theater and used the distance calculator on the Optoma website to calculate the necessary throw distance.

Victorian already knew he wanted a DLP projector and a big picture, but he didn't know much about the options available to him.
